

Lindholmen Science Park is an international collaborative environment for industry, academia and the public sector to work on research, innovation and education in transport, ICT and media. It is Gothenburg's most knowledge-intensive area - the vision is that 30,000 people will work, study or live at Lindholmen by 2020.

AUTONOMOUS LOGISTICS

Future challenges in transport are complex and require collaboration of a new type. Sweden is a front-runner in collaboration to produce innovative solutions - an ideal location for F&L to discuss the current state of land and sea-based automation, the extent to which we can automate, timescales for next developments and the impacts of change/investment on supply chains.

15:30 - 16:40

SUSTAINABILITY

Sustainability requires joint efforts. In 2017, Sweden was again ranked the world's most sustainable country and intends to become the world's first fossil-free nation. Successful collaboration requires that all participants in the supply chain see value in driving sustainable change.
